

Name of Dog: WALDMEISTER JOHNSON (TEST SB11)

Dear sir or madam,

We were asked to convey to you our research results on whether your dog, identified above, has two copies of the EPM2B gene expansion mutation and is therefore affected with Lafora disease, has a single copy of the EPM2B gene expansion mutation and is therefore a carrier of the mutation, or has no copy of the EPM2B expansion mutation and is therefore neither a carrier of this mutation nor affected with Lafora disease due to this mutation.

The above identified dog: **WALDMEISTER JOHNSON (TEST SB11)**

Has no copy of the EPM2B expansion mutation and is **Clear**, therefore neither a carrier of this mutation nor affected with Lafora disease due to this mutation. This means the animal will not develop the disease, nor can it pass the disease on to any progeny.

Kind Regards

Dr. Berge Minassian
